Core research team: Dr Melissa Burgess (Principal Investigator), Muhammad Hassan Qaiser, Shanmugapriyah Thiyagarajah, Dr Silvia Mila Arlini, Dr Munshi Sulaiman (Statistician), Guillaume Rachou (Project Management), Ebrima Saidy (Governance), Suyeon Lee (Intern).

Technical research design advice: Dr Hadley Solomon (Ethicist), Saori Iwamoto, Stacie Gobin, Michael O'Donnell, Jonathan Fain, Dr Paul Bouey, Narmeen Adeel (Qualitative analysis), Sayeed Shahzada (Qualitative analysis).

Thematic advice: Health and nutrition: Adetayo Omoni, Dr Shahab Ali Siddiqui, Dr Yasir Arafat. Education: Mya Gordon, Rachael Fermin. Child protection: Daniela Ritz, Georgina O'Hare, David Bloomer. Child poverty: Lavinia Loperfido, Chiara Orlassino, Nicole Dulieu. Child rights: Henk Van Beers. Advocacy: Shaheen Chughtai, Olof Blomqvist. Gender: Nicole Dulieu, Yeva Avakyan, Deanna Duplessis. Disability: Martina Orsander, Henok Zeratsion. Child participation: Bharti Mepani.

Regional expertise and implementation: Daniel Kariuki (Eastern and Southern Africa); Abdoul Harouna, Ingy Akoush and Teresa Amorim (West and Central Africa); Shatha El-Fayez (Middle East and Europe); Paula Smits (Latin America and the Caribbean); plus a large team in all participating countries.

Communications, media and participant recruitment: Madhu Kalra, Tamara Amalia, Kristiana Marton, Allison Zerkowitz.

Qualitative data analysis: Jessica Chia, Christine Truong, Sonja Horne, Marla Smith, plus a large team in all participating countries.

Abstract

COVID-19 has spread rapidly within and between countries across the globe. Governments worldwide have implemented measures to contain the spread of COVID-19 including school closures, home isolation/quarantine and community lockdown, all of which have had secondary impacts on children and their households. Save the Children launched a global research study to generate rigorous evidence on how the COVID-19 pandemic and measures implemented to mitigate it are impacting children's health, nutrition, learning, wellbeing, protection, family finances and poverty and to identify children's and their families' needs during these times. The research also captures children's views and messages for leaders and other children.

The research was implemented in 46 countries and results in the largest and most comprehensive survey of children and families during the COVID-19 crisis to date, with 31,683 parents and caregivers and 13,477 children aged between 11 and 17 participating in the research. The research sampled three distinct population groups: 1. Save the Children programme participants; 2. specific population groups of interest to Save the Children; 3. the general public.

A representative sample of Save the Children programme participants with telephone numbers or email addresses was obtained in 37 countries. Purposive samples of specific population groups that Save the Children work with, for example people living in camps for displaced persons or urban slums, were also obtained in some countries. Additionally, a convenience sample of the general public was obtained. The research explores differences in the impacts on and needs of children by region, age, gender, disability, minority group, indicators of poverty and more.

This report presents the global COVID-19 research series sample numbers and characteristics.

Reports presenting the research design and methods and findings are published separately and are available at: <https://resourcecentre.savethechildren.net/library/hidden-impact-covid-19-children-global-research-series>.

SAMPLE CHARACTERISTICS

SAMPLE CHARACTERISTICS

There are three distinct target groups recruited in the research study:

1. Save the Children program participants;
2. Populations of interest to Save the Children
3. The General public.

For Group 1 – Save the children program participant sample, data was collected from 17,565 adult respondents and 8,068 child respondents. An overview of the worldwide sample and samples for each of the regions, are presented in tables 1 to 8 below.

For Group 2 – the populations of interest sample, data was collected from 4,302 adult respondents and 2,223 child respondents. An overview of the worldwide sample and samples for each of the regions, are presented in tables 9 to 12 below.

For Group 3 – the general public sample, data was collected from 9,816 adult respondents and 3,185 child respondents, from across the world, including countries where the online survey was actively promoted, and other countries across the world. An overview of the worldwide sample and samples for each of the regions, are presented in tables 13 to 20 below.

Group 1: Save the Children program participants

This group includes the respondents who are selected randomly or selected using stratified random sample method from the current program participants across all Save the Children programs (derived from program database of program participants with contact details). We also ensure that there are appropriate proportions of program participants in the sample, including those without access to the internet, living in rural/remote areas, and participating across sectors or programs.

Group 2: Target Population of interest to Save the Children

The respondents are selected using purposive random sampling to reach the target population groups of interest to Save the Children. The groups include:

- A group with certain characteristics i.e. Migrant groups
- People living in a particular urban slum, refugee camp, or other 'discrete' community
- Program participants of a particular program that you want more information on. Please note that program participants in the random beneficiary sample should not be invited into this purposive sample.
